- Python
- Django/Flask
- PostgreSQL
- MongoDB
- GraphQL
- Software Testing
- TypeScript

Education

General Assembly Software Engineering Immersive *Remote* | 9/20 – 12/20

Twelve-week program with over 450 hours of hands on full-stack development and 4 portfolio projects. Certificate of achievement awarded upon completion.

Projects

BookNBeyond Blog *12/20*

Personal blog project using NextJS for SSR and markdown files. Blog post devoted to helping bootcamp and self-taught programmers transition into the working world.

Goal Getter *11/20*

An app for creating goal and task oriented lists to manage time. Main technologies used include Express, PostgreSQL, Passport Authentication, and React.

Better Boothang *10/20*

A project using Express, Passport, EJS, and Twillio to automate messaging to significant other. This program can text pre-made messages to client's "boothang" with end goal to text on a scheduled basis.

Relevant Experience

Software Tester | Taliferro IT Consulting
Seattle, WA | 01/05 – Current

Create test plans and procedures for e-commerce website at different stages in development process.

- Debugged code and located root causes of problems by reviewing configuration files and logs.
- Create error reports on poor performance, interface issues, and functionality issues such as user-acceptance.
- Collaborated with developers and product owners to stay current on product features and intended functionality.

Usability Testing | Carmel Management
Redmond, WA | 04/06 – 01/11

Identified and tracked defects with software and supported developers in resolving problems by completing additional tests.

- Worked directly with quality control, shipping, software development and usability.
- Answered calls from patients with questions about how to fill prescriptions over phone.
